## TRIMMING MACHINE FOR OLIVE TREES NBH 1090 D

- Specially designed for intensive olive tree planting.
- Constructed on a bilateral reinforced mast with great resistance.
- Allows total visibility of the working area.
- It has a mechanical scanner system, which allows a correct operation without damaging the tree trunk.
- 900 mm cuts, with independent hydraulic positioning.
- It has a raising cylinder which raises the horizontal cutting from a minimum height of 400 mm to a maximum height of 1200 mm.
- Designed for working on planting of between 4 and 4,5 metres wide.
- Includes hydraulic opening and electrical command as standard with constant pressure.
- Hydraulic raising.
