

Trimming machine for olive trees S-685A

- Constructed on a bilateral mast.
- Allows total visibility of the working area.
- 850 mm cuts with manual positioning.
- It has a mechanical scanner system, which allows a correct operation without damaging the tree trunk.
- Especially designed for growing olive trees on superintensive planting.
- The hydraulic opening system allows the user to adapt the cut to your planting size.
- Designed for working on a planting of between 3,5 and 4 metres wide.
- Possibility of adding a manual or electrical command.
